

Exhibition Center Mérida (IFEME)

BOSCH
Invented for life

Industry:

Exhibition Center

End User:

Exhibition Center Mérida

Business Objective:

With a size of 6.800 m² the Exhibition Center of Mérida (IFEME) is part of the project of the city of Mérida to boost the economy in the region. The Exhibition Center was designed for trade shows as well as for other events (e.g. concerts). To make the project a success it was necessary to take the uniqueness of the building into account. One part of it consists of old industrial buildings that were remodeled, while another part is newly-constructed. In addition a parking area for more than 200 cars belongs to the Exhibition Center that needed to be equipped with acoustic devices.

Solution:

Bosch Security Systems managed successfully to develop a solution that meets the customer demands and provides for the requirements of the location. As evacuation system the TÜV-certified Bosch Praesideo system has been chosen. To set up an adequate public address system the Bosch engineers provided individual acoustic solutions for the different halls bearing in mind the special architecture and condition of each of them. As a result the new Bosch hemi-directional loudspeaker with high quality sound were installed making the IFEME the first fairground of this type.

In the remaining areas the following products were installed to achieve an adequate sound: loudspeakers of the type LBC 3102/16 and LBC 3411/01 in the public and cafeteria areas, sound projectors LP1-UC20E in technical areas and horn loudspeakers LBC 3492/12 and LBC 3700/00 in the parking area.

Main Entrance Exhibition Center of Mérida

Result:

As a result of the installations that were realized the exhibition center of Mérida is not only equipped with an acoustic evacuation system certified with the IEC norm 60849, but also with a public address system that is able to produce high quality sounds of voices as well as of music.
