

Extreme in Action: Plate Capture Key in Construction Site Arrests

BOSCH

Invented for life

“UCIT Online Security currently averages two arrests per week and the REG cameras are a key piece of the puzzle when it comes to providing the right evidence in the case. We use REG on all our sites.”

Sidney Sommer, President & CEO, UCIT Online Security

Customer: UCIT Online Security

Sector: Industrial

Product: REG License Plate Capture Cameras

REG License Plate Capture Key in Arresting Construction Site Thieves and Vandals

License plate images produced by Bosch’s REG License Plate Capture cameras are field-proven to be a valuable tool in investigating criminal activity. Whenever hi-tech security firm UCIT Online Security is charged with helping protect a construction site, it installs REG cameras at the premises to assist in preventing theft and vandalism, and in identifying culprits who target the location. By capturing definitive plate images of all vehicles entering and exiting the construction site 24/7, REG cameras enable the arrest of at least two suspects per week.

Problem: Theft and vandalism at construction sites

- Sites require record of every vehicle entering and exiting premises
- Security guards cannot record license plate of every vehicle
- Vehicle traffic unmonitored when security guards take breaks
- Thieves and vandals cannot be unidentified

Solution: REG for effective 24/7 plate capture at construction sites

- REG captures plate of every vehicle entering and exiting the site
- License plate information allows identification of suspects
- REG operates 24/7 in all lighting and weather conditions
- Ambient Rejection technology eliminates sunlight / headlight glare for a definitive plate image
- Irrefutable plate images usable as evidence in a court of law

Results: Plate capture enables arrest of construction site criminals

- Irrefutable evidence leads to arrest
- Cameras at work sites deter criminal activity
- Decreased theft at construction sites
- REG cameras combine with security guard surveillance for improved access control
- Reduced capital losses for construction sites
